

air-lux® DESCENDING WINDOW

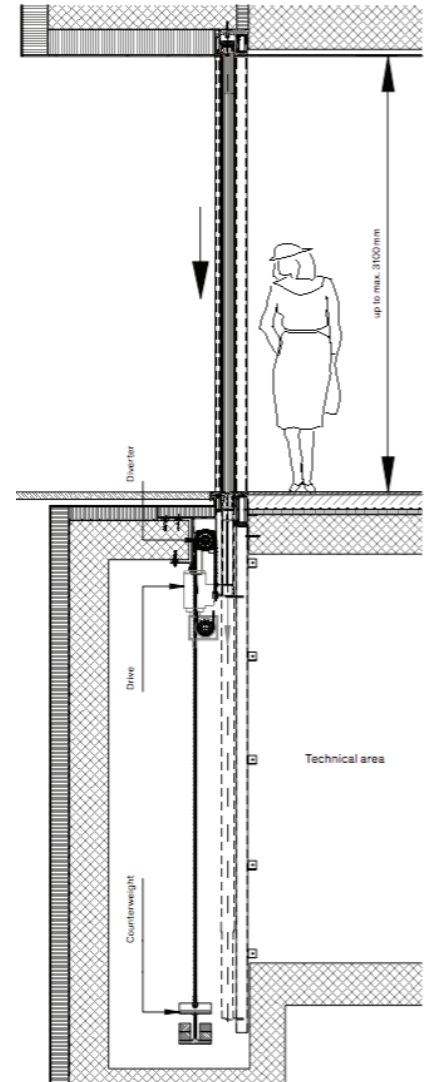

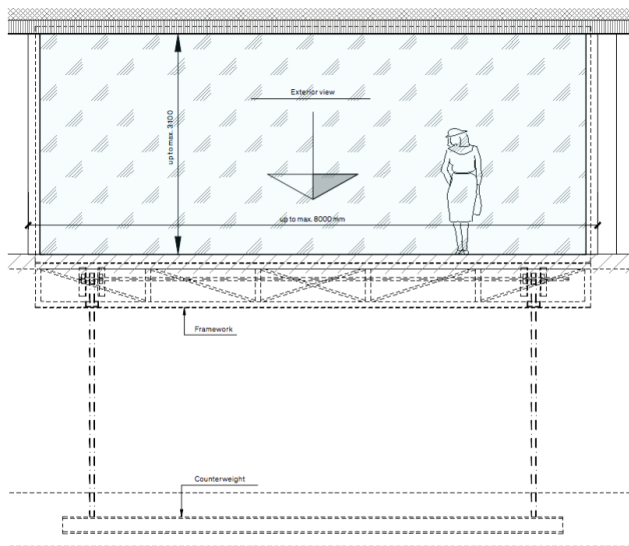

Air-Lux has created a new paradigm in fenestration products with the Descending Window. By designing a system in which the entire width of the window can be opened without the requirements of side pockets or stacked sliding panels, Air-Lux has once again shattered pre-conceived expectations and limitations in both the design and construction of exterior facades. At the press of a button, the Descending Window lowers completely into a concealed pocket – completely opening up interior spaces to the exterior like never before.

As is typical for Swiss-made products, the Air-Lux Descending Window is manufactured from high-quality aluminum that cultivates a robust yet elegant frame profile that meets or exceeds the highest quality standards. Because of the superior hardware, framework, and sealing system, the Descending Window provides perfect operation every time.

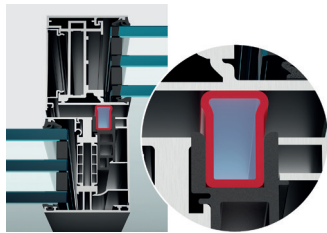

Max Dimensions

26'x10' (WxH) per leaf / 8000mm x 3100mm (WxH) per leaf

Air-Lux Sealing

Active

With the press of a button, air is introduced into the frame. This closes the gap between the slider and the fixed frame, creating a perfect seal.

Inactive

To open the unit, the button is pressed a second time. The air is released and the seal retracts to its original concave profile.
